

MICHAEL EMEFIENEM

emefienemmichael@gmail.com | GitHub | LinkedIn | Website

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building scalable React and TypeScript applications, real-time systems, and AI-powered products across startup and production environments. Experienced in developing dashboards, internal tools, workflow systems, and full-stack applications using React, Next.js, Node.js, PostgreSQL, and modern frontend architecture patterns. Passionate about building performant, user-focused systems that solve real-world problems through thoughtful engineering and product execution.

TECHNICAL SKILLS

Frontend

React.js, Next.js, TypeScript, JavaScript, Redux, Zustand, Tailwind CSS, SCSS, Responsive Design

Backend & Databases

Node.js, Express.js, PostgreSQL, Prisma ORM, Drizzle ORM, MongoDB, Firebase, GraphQL

Cloud & Tools

Git, Docker, AWS, Postman, Vercel, Render, VS Code

Engineering Strengths

Frontend Architecture, API Integration, Authentication & Authorization, Real-Time Applications, State Management, Component Reusability, Performance Optimization, Scalable UI Systems

PROFESSIONAL EXPERIENCE

Axendit Limited – Software Engineer

Lagos, Nigeria | March 2024 – April 2026

- Contributed to the development of enterprise and public-sector web applications using React, Node.js, PostgreSQL, and WebSocket technologies.
- Built a real-time communication system that improved interactions between students, teachers, parents, and administrators within a school management platform.
- Developed and maintained features for attendance tracking, grade management, complaint resolution, and other core business workflows.
- Improved application security through JWT-based authentication, role-based access control, and secure data handling practices.
- Co-developed Version 2 of the Nigeria Civil Aviation Authority (NCAA) Consumer Protection Portal, supporting national-level complaint management and customer service operations.
- Refactored frontend modules and API integration patterns, improving maintainability, scalability, and overall application performance.
- Optimized backend data processing and database interactions, resulting in improved responsiveness and system reliability.
- Collaborated with designers, backend engineers, product stakeholders, and cross-functional teams to deliver production-ready features and enhance development workflows.
- Contributed to architecture discussions and implementation of secure, scalable solutions for handling sensitive user and organizational data.
- Assisted in improving software quality through testing, debugging, code reviews, and adherence to engineering best practices.

Bond – Frontend Developer (Contract)

Remote | January 2026 – March 2026

- Led frontend development for the company's marketing website and internal back-office platform using React and TypeScript in a fast-paced startup environment.
- Designed scalable frontend architecture and reusable component systems that accelerated feature delivery and improved maintainability.
- Built merchant dashboard features that improved transaction visibility and streamlined operational workflows.
- Integrated frontend systems with backend APIs while maintaining clean state management and modular code organization.
- Delivered production-ready features in a fast-paced startup environment under tight deadlines

Zidio Development – Web Developer Intern

Remote | June 2023 – February 2024

- Accelerated site conversion rates by 20% by developing and maintaining high-performing, responsive and complex web applications using React, Redux, with improving page load times and optimizing for mobile and cross-browser compatibility, which enhanced overall user experience and engagement.
- Cut website maintenance time by 40% by implementing reusable components and modular code structures in JavaScript, reducing development cycles for new features and minimizing long-term upkeep costs.

SELECTED PROJECTS

AI Wireframe-to-Code Platform | Next.js, TypeScript, OpenRouter AI, PostgreSQL, Drizzle ORM, Tailwind CSS

- Built an AI-powered wireframe-to-code platform that converts uploaded UI wireframes into editable React and Tailwind CSS components.
- Integrated OpenRouter AI models to generate frontend code dynamically from uploaded wireframe inputs.
- Developed an interactive browser-based editing workflow using CodeSandbox integration.
- Implemented TypeScript-based scalable architecture and PostgreSQL data persistence with Drizzle ORM.

Live Demo: <https://wireframe-to-code-emefienem.vercel.app/>

AI Waste Management System | Next.js, Google Gemini AI, PostgreSQL and Drizzle ORM

- Built an AI-assisted waste reporting platform that uses Google Gemini AI to verify uploaded waste reports.
- Developed reward and leaderboard systems to improve community participation and engagement.
- Implemented secure authentication flows with Web3Auth and optimized data handling using Drizzle ORM.
- Built responsive user interfaces with Tailwind CSS and React Hooks for improved usability across devices.

Live Demo: <https://ai-waste-management-system.vercel.app/>

EDUCATION

LAGOS STATE UNIVERSITY

Lagos, Nigeria | July 2021 – September 2025

Bachelor of Science (B.Sc.) Computer Science – CGPA: 4.36/5.0
